# lux mandate **Balanced**

# Philosophy

lux | mandate is a core investment solution designed by a team of experts in asset management. Investment decisions are delegated to the Spuerkeess Asset Management's portfolio management team, acting as the investment advisor. This dedicated team of experts gives recommendations on assets' allocation and selection within the definite framework of the agreed investment strategy. The resulting portfolio is invested in accordance with a particular investor risk profile and ESG profile defined for each investor. Portfolio models are actively managed and diversified among major asset classes, geographies and currencies. The allocation choices are guided by the Global Asset Allocation Committee held on a monthly basis and composed of strategists and economists from Spuerkeess Asset Management. This target allocation is applied to the lux | mandate model portfolio to make sure clients' investments are always exposed efficiently and adapted to the current macroeconomic environment. All

investments are made in internal funds and mainly through lux | funds. In other words, lux | mandate is an integrated investment solution that adapts to the investor regardless of their risk profile and ESG profile. lux | mandate provides access to an active management strategy that applies the market views of Spuerkeess Asset Management's asset management specialists and invests in a diverse range of in-house funds managed by Spuerkeess Asset Management.

# **Investment Policy**

The aim of the Standard BALANCED strategy is long-term portfolio growth with relatively limited risk. This strategy's assets are invested primarily in equities, bonds and/or money market UCI or in similar products and/or liquid funds. The strategy's anticipating average equity weighting is 40% over the long term, depending on market trends. This type of investment is suitable for investors seeking medium and long-term capital growth.

# **Risk level**

1	2	3	4	5	6	7

The level of risk is determined on the basis of the historical performance of the last five years and should not be considered a reliable indicator of the future risk profile of the compartment. It represents the risk of fluctuations in the net asset value of the portfolio and may change over time
